

Applications Developer

Barcelona, Barcelona (Híbrido)

Application deadline: 31 August 2026 at 17:00 (Barcelona time)

Who are we?

Urban Mobility

Co-funded by
the European Union

EIT Urban Mobility ([EIT Urban Mobility - largest community for urban mobility innovation](#)) is an initiative of the European Institute of Innovation and Technology (EIT), a body of the European Union and Europe's largest network for transport innovation in cities.

Our mission is to accelerate change towards a sustainable model of urban mobility and liveable urban spaces. We connect public and private actors and provide them with access to markets, talent, finance and knowledge.

Using cities as living labs, our industry, research and university partners will demonstrate how new technologies can work to solve real problems in real cities by transporting people, goods and waste in smarter ways.

Join our team and be part of the change!

Be part of a team where:

The **Applications Developer**, working closely with the Software Developer Manager and the Technology team, contributes to the development and maintenance of a highly customised NetSuite environment. This includes workflows, custom records, and JavaScript based automation (SuiteScript) that power core business operations.

The role is centred on engineering and continuous improvement: designing and delivering scripts and automations, enhancing existing workflows, ensuring safe deployments, and keeping the system stable and scalable. Day to day user support is handled by an external provider, allowing you to focus on technical implementation and automation.

You will also contribute to the evolution of an internal applications agent that helps users self serve common requests, reducing manual work across the organisation.

This will include the following tasks:

- SuiteScript development: Build and maintain NetSuite customisations and JavaScript automations.
- Workflow optimisation: Create and improve approval flows,

notifications, validations, and supporting

scripts.

- Technical implementation: Deliver enhancements based on specifications defined by the Technical Lead and Business Process Owner.
- Issue resolution: Investigate and fix issues related to scripts, configuration, access, workflows, and approvals.
- Automated testing & deployment: Contribute to automated testing and deployment processes to ensure safe, repeatable releases.
- Documentation: Produce technical and user documentation to support consistency and autonomy.
- Internal applications agent: Help shape and improve an internal applications support agent (content, flows, integration points) to automate common requests.
- Vendor management: Manage the external provider responsible for NetSuite support and maintenance.

What you will bring along the way:

We're looking for someone who is proactive, solution oriented, and comfortable working in a dynamic environment. You pay attention to detail, enjoy improving processes, and take pride in delivering reliable technical solutions.

You communicate clearly, collaborate well with colleagues, and feel comfortable working with structured requirements and technical guidance. You enjoy building tools, automations, and workflows that make internal operations smoother and more efficient.

An ideal candidate would strive to generate positive environmental and social impact in line with EIT Urban Mobility's mission.

Must-have:

- Relevant studies in Software Development, Computer Science, Information Technology, or equivalent experience.
- Minimum 1+ year experience in a similar role (applications administration, ERP/application logic, or related technical role).
- Technical skills: JavaScript, SQL, HTML, CSS.
- English proficiency (C1 written and spoken).
- Software development background or experience working with application logic and workflows.
- Ability to understand and write pseudocode to design, explain, or review logic for workflows and scripts.
- Ability to read code and support applications, reports, and processes.
- Experience working in an agile development environment (SCRUM, Kanban).
- Interest in new tools and technologies.

Nice-to-have:

- Technical skills: REST APIs, Python, experience with Vue.js.
- Familiarity with LLMs or AI agents (design, integration, or experimentation).

What's in it for you:

- Work in an international environment with a company culture focused on empowerment, thriving and continuous growth.
- Work within a multidisciplinary team and develop expertise in the field of urban mobility.
- Participate in webinars and online courses to enhance knowledge and skills.
- Join a creative and diverse team of highly driven individuals that take out-of-the-box thinking to another level.
- Strike the right work-life balance: on top of the flexible hours and remote working options and facilities, you will be granted 27 days of paid time-off to rest and re-energise.
- A yearly training catalogue to support your career development.
- A tax benefit powered by Cobee, allowing you to save on your personal income tax.
- A private health insurance borne by the Company.
- Work in a modern, flexible and collaborative workspace, located in the 22@ area.
- Bike to work and park safely in our premises.

Kindly note that this is a **permanent and full-time position**, and it is based in **Barcelona, Spain**.

Possibility to work from home 2 days a week.

No relocation expenses are granted.

General Conditions:

By the closing date of this call candidates must:

- be a national of an EU Member State or have a working permit valid to work in Spain;
- enjoy their full rights as citizens;

If you are interested this position, please complete and submit your application before the deadline on our online application platform: BambooHR.

EQUAL EMPLOYMENT OPPORTUNITY STATEMENT
