

Production Manager

Northvolt has exciting job offers for Production Managers to join our passionate team in Skellefteå.

In joining us you will play an important part from the very start in building one of the first large scale European battery factories and contribute to the transformation to a carbon-free society.

As a Production Manager you will take responsibility for planning, directing and monitoring all production activities within your designated process area (Cell Assembly, Cathode Electrode or Anode) in order to maximize the use of the organization's resources and meet established production specifications and schedules; safety, quality, deliveries, efficiency, cost, and people.

You will be leading, directing, evaluating, and developing a team of Shift managers who are responsible for various production activities such as, machine operation, processing, assembly or packaging. In joining this team, you will gain extensive insight into Northvolt's manufacturing, as well as get support and opportunity to develop your management and leadership skills.

You are an enthusiastic learner who takes ownership and responsibility for tasks and are eager to collaborate to achieve great results. You have a background in modern Operations Management principles such as Lean, Kaizen, and Six Sigma. You will be participating in developing and/or implementing manufacturing procedures and allocate labor and capital resources to maximize productivity and yield. You will be working with analyzing production and malfunction records to identify problems and recommend solutions (for example changes to procedures, workflow, or equipment) that will improve performance. Previously you will have had firsthand experience in developing new methods, tools, and processes in dynamic and fast-changing environments, being responsible for implementation in your own area, and sharing of best practices. In general, you have a collaborative spirit, and you are eager to contribute to building great end-results.

Responsibilities include but are not limited to:

Liaise with functional or operational area managers (for example in planning, logistics, maintenance, technology, quality) and together understand current and future needs and develop plans, cost estimates, and schedules for integrating these needs into existing manufacturing activities.

- Together with maintenance, plan, prioritize, and manage production line maintenance or downtime to minimize disruptions to manufacturing schedules.
- Has full managerial responsibility for multiple shift teams. Work is normally carried out in an indirect manner (as 'grandparent') and by setting organizational targets.
- Ensure that work is performed in accordance with Northvolt's Code of Conduct, applicable legislation, and policies as well as the management system routines and standards.

You are a team player with a passion for people, strongly goal-oriented, curious and eager to learn. You will get the chance to have a real impact on our success story in Sweden (to start with) and see the results of your work. Our organization requires and values great self-discipline and a natural talent to make things happen.

You will be a vital member of the Northvolt Ett Production team and, alongside being a part of a vibrant and diverse organization, you will be key to Northvolt's mission to enable the future of energy.

Full-time employment, fixed salary. Planned starting date is asap.

Education/Experience

- Bachelor of science in mechanical/industrial engineering
- Proven Leadership in manufacturing Organizations
- Experience in the modern Operations Management principles: Lean, Kaizen and Six Sigma
- Documented leadership training
- Worked in multi-cultural environment
- Curious, technically educated and with a strong business background
